Patient Name	GOUTHAM ARVINDH BC	Patient ID	CT NO 1076
Age/D.O.B	46Y/M	OP NO	228861
Ref Doctor	DR.BHUVANA	Date	17 Nov 25

CT THORAX HRCT

Protocol

Volume scan of chest was done with High Resolution Lung algorithm

Observations

LUNGS:

- Small soft nodule noted in subpleural region superior segment right lower lobe lateral segment likely small fibrotic nodule.
- The lung parenchyma appears normal.
- No abnormal nodular lesions or septal thickening detected.
- The parenchymal vessels appear normal.
- No abnormal area of increased density or hyperlucency is seen in the lung parenchyma.
- No bronchial thickening or bronchiectasis is seen
- There are no airspace opacities, interstitial thickening, fibrosis or emphysematous changes

MEDIASTINUM:

- No significant mediastinal or hilar lymphadenopathy is noted.
- The mediastinum appears normal. The great vessels of thorax and cardia appear normal.
- **Hyperdensity noted in left circumflex artery- calcification deposition ? Stent**
- The trachea, paratracheal regions and subcarinal regions appear normal. The main bronchi, tracheo-bronchial regions and broncho-pulmonary regions appear normal.
- Oesophagus shows no abnormality

PLEURA:

- The pleura and pleural space appear normal.

12th 'A' Cross, Sindhi Hospital Road, Sampangiramanagar, Bangalore - 560027.
Ph. : 49030303, 22237318, 22237117 | E-mail : info@hindujasindhihospital.com

SKELETAL PROCESS:

- Chest wall appears normal.
- Bony thoracic cage is normal
- No lytic or sclerotic lesion in visualized bones/spine

Impression

- **No significant abnormality is seen in the thorax**
- **Small soft nodule noted in subpleural region superior segment right lower lobe lateral segment likely small fibrotic nodule.**
